THE GRAPHIC CLINICAL CHART,

By J. P. Crozer Griffith, M. D.,

INSTRUCTOR IN CLINICAL MEDICINE IN THE UNIVERSITY OF PENNSYLVANIA.

DIRECTIONS FOR USE.

The method of denoting Pulse and Respiration by written figures being eminently unsatisfactory, this Chart has been devised in order that these, as well as the Temperature, may be recorded *graphically*.

The Pulse-curve should be drawn with red ink or pencil, or with a hyphen line; the Respiration-curve with blue or violet ink or pencil, or with a dotted line; the Temperature-curve, as usual, with a continuous black line. If it is so desired, only the Temperature need be indicated. The "Normal line," as marked on the Chart, is that most commonly adopted for Pulse, Respiration and Temperature. The figures above and below this are arranged to preserve, as far as possible, the usual Pulse-respiration-temperature ratio.

Clinical Notes and Memoranda may be made on the face of the Chart in the space indicated by the arrows; more extended remarks on its back; the paper being sufficiently opaque to allow of writing on both sides.
